Objective

Developing an android application, where:

- Individuals, movie reviewers & analysts can leave their review/opinion on each movie.
 - Individuals can check out different movies and decide (based on the movies' ratings) which one to watch beforehand.
 - Individuals can mark movies they love as favourites.
 - Individuals can create a watch-later list to keep track of movies they haven't watched yet.
-

Functionalities

1. **Splash screen when the user opens the app, or when he logs in/out.**
2. **User Login & Signup pages.**
3. **Main page:**
 - All movies are listed (names, posters, average rating).
 - Movies can be filtered by genre.
 - Search bar to filter movies by name.
 - Refresh button to update the page.
 - Options menu which allows you to go to favourites, profile, or log out. It also contains a sub menu to toggle dark mode and go
4. **Movie Review page:**
 - A movie is listed (name, poster, description) alongside a clickable rating bar and a review button.
 - Context menu to copy the movie's description.
 - Review button opens a dialog where you can input review body. It also shows all reviews made on this movie (username, rating, body).
 - Any change in the review (rating or body) is immediately updated.
5. **Profile page to show all user's information (username, email, role, number of reviews made, number of favourites and watch later).**
6. **When the user closes the app:**
 - If he was logged in, he continues his previous session when he opens the app again.
 - If he was logged out, the application opens on the login menu.
7. **Database alongside helper functions to store all information (users, movies, reviews, favourites lists, watch later lists).**
